- *Constructing Cooperation: Process and Agency in Multilateral Military Coalition-Building* (under review with Cornell University Press)

Multilateral military coalition-building involves intense diplomatic negotiations: states need to be swayed to join a given military coalition. This book examines whether these negotiations follow a systematic pattern. It suggests that *pivotal states*, states that are the most interested in a particular coalition deployment are in charge of these negotiations. To smooth the bargaining process, these pivotal states rely on their *diplomatic networks* (rather than alliance structures) to gather information on deployment preferences of potential coalition participants. Moreover, diplomatic networks also create trust and facilitate the construction of issue-linkages and side-payments. These networks are, of course, part of a pivotal state's power infrastructure. Nevertheless, asymmetric power relations alone cannot determine bargaining outcomes. Potential participants are often aware of how much pivotal states desire their coalition contribution. They thus hold considerable bargaining power in coalition negotiations. The book illustrates and tests this theory using statistical methods and case studies of the coalition-building processes for the Korean War, the Australia-led intervention in East Timor, the EU operation in Chad/CAR and the UN-AU operation in Darfur. The case studies are based on archival research as well as draw from over 150 elite interviews. The book makes an important contribution to IR scholarship on (military) coalition-building, international negotiations and diplomacy.

- *Intervention Entrepreneurs* (work in progress)

This book manuscript examines the underlying political processes which lead to the launch of a military intervention. Most conflicts that are being considered for intervention have existed for years. So what explains the sudden upsurge in interest? What are the mechanisms behind an intervention proposal capturing the attention and often mobilizing the resources of the entire international community? This book argues that *Intervention Entrepreneurs* are key to understanding why military interventions come about. I define *Intervention Entrepreneurs* as individuals or groups who promote the launch of a specific military intervention because they anticipate to benefit disproportionately from the intervention decision and/or aftermath. Without the existence of these intervention entrepreneurs a specific military intervention in its form and timing would not have occurred. The book argues that the actions of these entrepreneurs follow a systematic pattern: (1) they create a narrative for intervention; (2) they spread and sell this narrative and raise public expectations for intervention; (3) they build domestic coalitions favoring intervention and (4) lobby the head of government to agree to the intervention proposal. The book draws on six thoroughly researched case studies to illustrate these strategies and their importance in intervention decisions: The Gulf War; the Korean War; French intervention in Mali; US intervention Iraq; AU-UN intervention in Darfur and NATO intervention in Libya.
